

# WM Blanchard Case Study

## CHALLENGE

Blanchard Construction uses Procore's cloud-based construction management platform to manage its construction projects.

Most senior executives responsible for approving contracts and contract change orders found that using the “out of the box Procore functionality” for approvals to be a challenge and time consuming.

## SOLUTION

Solution made it dramatically easier for senior approvers at Blanchard to find and review the information they needed to confidently approve contracts and change orders in a timely manner.

The end-product was a custom mobile app that pulled data from Procore and presented it to the executives in an all-in-one view of the items they needed to approve with an easy to use approve/reject functionality that would automatically update the approval workflow status back in Procore.

## VALUE-ADD

Streamlining the Approval Process for Senior Executives resulted in a drastic reduction in project delays and approval related bottlenecks.

Consolidating all diligence related questions surrounding change orders in one easy-to-access interface results in greater visibility for approvers, resulting in more pushback on questionable change requests.
